

It's time to look beyond Plain Old Telephone Service.

Digital Transformation isn't complete if you're still running vital services on Plain Old Telephone Service (POTS) lines.

These include life and safety systems, like elevator emergency phones, security and fire alarms, and blue-light call boxes, as well as legacy fax machines, PBX systems, meter readers and some credit card processors.

Critical business applications deserve modern connectivity, and a recent FCC ruling means some providers will soon phase out support for some types of POTS lines.

Verizon makes it easy to transition from analog POTS lines to a reliable, flexible wireless and future-ready digital alternative **where available** – without the business interruption.

POTS replacement is quick and easy with Verizon.

Verizon offers a choice of 4G or 5G plain old telephone service (POTS) replacement solutions where available via bring your own device (BYOD) certified routers and modular enclosures that includes an integrated ATA (Analog Telephone Adapter) with multiple ports for existing application continuity and a built-in router with a 12-24 hour back-up.

Wireless connectivity paired with collaboration tools can accelerate business transformation.

Wireless business internet from Verizon is for more than just POTS replacement; it not only helps lower overall line cost but can enable your business to be more agile with connectivity for work from a variety of places - home offices, branch offices, temporary sites and more. It can also support the adoption of other new technologies that can improve your collaboration and strengthen your business.

After replacing POTS, consider other innovative collaboration solutions including BlueJeans by Verizon.

Why Verizon for POTS replacement with a wireless solution?

- Simple set up from your choice of solutions
- Managed service options to support your enterprise
- Flexible wireless plans to scale service up and down as needed
- Reliable connectivity, virtually anywhere
- Future ready nationwide LTE, upgradable to 5G when available
- One provider nationwide
