

With today's shifting cyberthreats, status quo security isn't enough.

Go beyond traditional with a strong security solution that helps protect against emerging threats and block access to content that may be inappropriate for the workplace.

Running a business means wearing a lot of hats. "Security" shouldn't have to be one of them. Verizon Business Internet Security helps protect your devices, business information and financial records – even as new threats emerge.

Viruses, ransomware, phishing, crypto-jacking and spyware are among the many threats businesses face every day. Verizon Business Internet Security helps keep businesses safe against malware and online threats. These threats can cause major disruption to business operations, financial loss, compromised customer data, and reputational damage.

Verizon Business Internet Security is available as an add-on with any qualified Wireless Business Internet plan, which offers you reliable internet connectivity that is easy to install and set up.

Since Verizon Business Internet Security is built into the Verizon mobile network, protection is enabled immediately without the need to install or download anything on your devices.

How Verizon Business Internet Security helps protect your business.

Verizon Business Internet Security is easy to use and is available in two options – Plus and Preferred. It provides:

Strong protection – Internet security to help safeguard your devices by blocking access to malicious websites and malware. With Preferred, enhance this protection by restricting access to content that may be inappropriate for the workplace.

Installation at the network level – Enabled at the Verizon mobile network level, which means there is nothing to install on your devices or manage in your environment.

Technical support – Live voice support is available during business hours. And with Preferred, you also get support to set up and manage your security features.

Clear and intuitive control – An online dashboard makes it easy for you to monitor security activity.

Why Verizon

For nearly 25 years, Verizon has been helping security leaders and their teams achieve and maintain that elusive balance between tactical excellence and strategic influence. We offer a comprehensive and proven portfolio of managed and professional services that enables security teams to optimize their operations, from threat identification and detection to response and recovery.

From complex multinational enterprises and small and medium businesses to local, state and federal agencies, every organization has a different threat profile, different risk tolerances and different strategic business objectives. So a one-size-fits-all approach to security is simply not enough. At Verizon, we meet your security program where it is, and we help you get it where you want it to be.
