

# All your global IoT roaming. One SKU. One carrier.

## Global IoT Roaming

Enjoy a complete IoT connectivity solution that can take your operations global now and help build future-ready architecture into your products down the line.

The old ways are complicated, costly and time-consuming. Thankfully, the days of engaging a different SIM stock-keeping unit (SKU) for Internet of Things (IoT) roaming in every country in which you operate are over.

Verizon Global IoT Roaming is a solution that allows you to build and manage devices with a single SIM SKU and connectivity management platform with Verizon.

It delivers connectivity to enterprise customers who need to operate their Verizon activated IoT devices using data and Short Message Service (SMS) in certain markets outside the U.S. for an extended period of time or permanently.

### What's eligible?

All IoT devices using data and SMS with supported frequency bands in available countries are eligible. Smartphones, tablets, hotspots and IoT devices requiring voice are not.

Global IoT Roaming addresses scenarios where devices are intended to operate in a country outside of the U.S. for longer than 90 days.

### Use case - vending

A vending machine customer currently has cellular-connected vending machines deployed in the U.S. The machines need connectivity for processing credit card transactions and sending location updates to the customer and for receiving software updates. The customer is also

looking to expand deployment into the European market. Currently, at manufacturing, the customer does not know which machines are deployed in the U.S. vs. Europe and must maintain a single SKU.

### Experience your entire IoT ecosystem on ThingSpace.

The Verizon solution includes the ThingSpace connectivity management platform for global and U.S. IoT connections management. You can manage up to 10,000 devices in one application programming interface (API) operation.

We partner with you to build and manage everything from one set of APIs. With single-pane-of-glass visibility, you can drastically simplify the life cycle management of your U.S. and international devices. And you have one industry-leading carrier, Verizon, with scale capabilities in countries around the world.

### Why Verizon?

In today's global environment, quality and availability matter. Verizon is here to stay—partnering with like-minded mobile network operators around the world. Let's work together to build a long-term business and technology strategy.
