

Your business may have the future on hold.

Solution brief

Convert legacy communications infrastructure with Verizon's POTS replacement solutions.

Making regulatory changes work for your business

Analog and copper lines have successfully delivered critical services for businesses for years, but regulatory changes may require a new approach.

For that reason, many businesses are considering updating business communications to support seamless interactions for customers and employees who are on the move.

This includes replacing traditional landlines or Plain Old Telephone Service (POTS) lines.

Move forward with confidence

Businesses like yours know that digital transformation can be necessary and may improve operational efficiencies. But maintaining business as usual is critical during any transition.

Transition concerns may include:

Avoiding downtime

Installation and ramp-up shouldn't cause business disruptions or breaks in customer communications.

Maintaining applications

POTS replacement technology must work seamlessly with existing applications.

Worrying about connectivity

A wireless business internet solution must deliver reliable connectivity.

Trying a new provider

To provide service continuity, a new provider must deliver effective and simple solutions through proven technology.

Verizon's solutions can help with digital transformation.

Connect the existing to the future

Verizon's POTS solutions will keep businesses compliant and allow them to maintain existing services and applications while also updating their connectivity.

Verizon solutions can provide:

Simple, fast deployment with continuity

Maintain existing POTS applications, devices and numbers with an easy plug and play solution that simply replaces the connectivity.

Peace of mind with back-up

12-24 hour battery back-up LTE connectivity for failover and programmable notifications support business continuity.

Compliant certifications

HIPAA, PCI, FCC, NFPA, and UL compliant.

Scalability

Turnkey box handles one or multiple services depending on the ports needed to support your applications.

Reliable business internet and router

The highly reliable Verizon 4G LTE network, with 5G where available.

Easily transition from POTS lines to an updated infrastructure with Verizon's solutions:

POTS Simple Voice Phone
